THE ULTIMATE CONVENIENCE FOR COMFORT CONTROL

# CARRIER PUTS COMFORT CONTROL IN YOUR HANDS.

## WIRELESS CONVENIENCE

Carrier's Wireless Programmable Thermostat provides enhanced comfort control with the same convenience offered by a wireless phone, television remote control or garage door opener.

From the family room to the kitchen, from a baby's room to your own bedroom, this programmable thermostat puts responsive comfort control in the palm of your hand. With a large display and simple up-and-down arrow control buttons, the remote temperature sensor/control unit is easy to read and use. Plus, seven-day programmability allows you to create a comfort schedule that best matches your lifestyle.

## COMFORT CONTROL

Designed for maximum flexibility, the Wireless Programmable Thermostat is a great choice to replace an existing thermostat or as part of a new home construction. The basic setup consists of the remote thermostat and a receiver unit which can be mounted anywhere wiring is available: a furnace closet, attic, basement or the location of the present thermostat. One receiver can accommodate up to four remote thermostats. Each remote has an operating range of up to 500 feet (unobstructed) and the power to transmit through walls, ceilings and floors with power supplied by two standard AA-sized lithium batteries. You can control your comfort with confidence, knowing that a Carrier Wireless Programmable Thermostat will not interfere with other wireless devices in your home.

Seven-day programmability allows you to create a schedule that provides maximum comfort when you are home, and maximum efficiency when you are away or sleeping. Just plan your schedule, then follow the simple programming instructions and LCD prompts. The copy command saves time during programming by re-entering time and temperature information with the single touch of a button. When you're finished, relax and enjoy the comfort. The system automatically switches between heating and cooling operation. And, for vacations or holidays, you can temporarily bypass your programmed schedule with one-touch convenience.

Offering the system control you need with the convenience of room-to-room portability, the Wireless Programmable Thermostat is an excellent addition to any Carrier comfort system.
